

StyleSwift

Digital Studio Management Platform for Independent Fashion Designers in Accra, Ghana

StyleSwift replaces paper measurement notebooks and chaotic WhatsApp threads with a clean, AI-powered digital studio — accessible from any Android phone or tablet, with no app download required.

What StyleSwift Does

For Designers:

- Digital Measurement Book with gender-split male and female measurement fields
- Catalogue management — upload design photos and tag each style by Occasion, Gender, Style Direction, Garment Type, and Fabric Family
- Orders tracking with status management (Pending → In Progress → Ready → Delivered)
- Finance ledger for income and expense tracking
- Analytics dashboard showing catalogue and order performance
- Shareable personalised link for client onboarding

For Clients:

- 5-question visual Style Discovery quiz — tap only, no typing, completes in 90 seconds
 - AI-powered Reference Tag Engine matches client preferences to the designer's own catalogue
 - Personalised style recommendation card
 - One-tap WhatsApp share to send profile directly to the designer
-

Technology

- Pure HTML, CSS, and JavaScript — no frameworks, no build tools
 - Designer data stored in browser localStorage; catalogue is also synced to a lightweight Netlify Function + Blobs store so clients can view it from their own device — no separate server to manage
 - Works on any Android mobile or tablet browser
 - Single-file architecture for maximum simplicity and reliability
-

Deployment

Hosted on Netlify. Connected to this GitHub repository for automatic deployment on every push.
